

## How to Apply Nail Polish & Treatment Ingredient Labels 2021

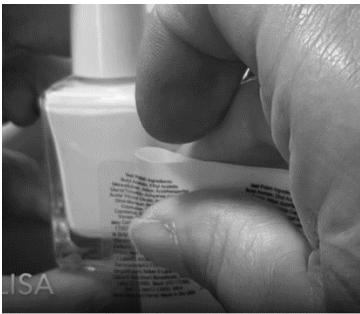

Diamond Cosmetics has instituted a new policy for Option #1. Production will not be placing ingredient labels on the back of the bottles. We will, however ship the labels along with your order. Please note, this is a common manufacturer practice.

We have provided all customers with Option #1 written directions and a quick video for label application.

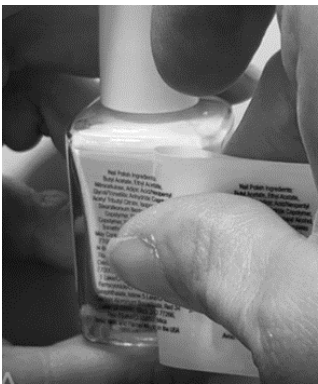

See written instructions below:

**STEP 1** – As shown on your invoice, it is imperative to review your order within 48 hours upon receipt. Please be sure to review all labels and organize each set of labels per product. **IMPORTANT: Not all ingredient labels are made the same. If you have treatments, please make sure to read the ingredients label to ensure you're placing it on the correct product.**

**STEP 2** – Place the label row in your hand and peel back the paper behind the label a quarter or half way.

**STEP 3** – Apply a quarter or half the label to the desired placement on the bottle.

**STEP 4** – Slowly and steadily peel back the white label paper and allow the label adhesive to stick to the glass.

***Repeat steps 2 - 4 per color/treatment.***
